

Probability Assignment-III

Nikhil Nair

I. PROBLEM

Find the mean number of heads in three tosses of a fair coin.

II. SOLUTION

Consider each trial results in success (i.e Heads) or failure (i.e Tails) represented by 1 and 0 respectively.

Let $X_i \in \{1,0\}$, i = 1,2,3 be the random variables representing the outcome for each coin toss.

p and q = (1 - p) are the probability of success and failure respectively.

$$p = P_{X_i}(1) = \frac{1}{2} \tag{1}$$

$$q = 1 - p = P_{X_i}(0) = \frac{1}{2}$$
 (2)

In n Bernoulli trials with k success and (n-k) failures, the probability of k success in n- Bernoulli trials can be given as

$$\Pr\left(X_i = k\right) = \begin{cases} {}^{n}C_k p^k q^{n-k} & 0 \le k \le n \\ 0 & \text{otherwise} \end{cases}$$
 (3)

where, n=3

The generating function (or z-transform) of $\Pr(X_i = k)$ is defined as

$$M_{X_i}(z) = E[z^{X_i}] = \sum_{k=-\infty}^{\infty} P_{X_i}(k)z^{-k}$$
 (4)

For a single coin toss,

$$E[z^{X_i}] = \sum_{k=0}^{1} P_{X_i}(k) z^{-k}$$
 (5)

$$= P_{X_i}(0)z^0 + P_{X_i}(1)z^{-1}$$
 (6)

$$= q + pz^{-1} \tag{7}$$

:.n number of tosses can be represented as,

$$E\left[z^{X_1+X_2+...+X_n}\right] = E\left[z^{X_1}z^{X_2}....z^{X_n}\right]$$
$$= E\left[z^{X_1}\right]E\left[z^{X_2}\right]....E\left[z^{X_n}\right]$$
(8)

 $(: X_1, X_2, ..., X_n)$ are independent and identically distributed)

 $\Rightarrow M_{X_i}(z)$ for n number of coin tosses is

$$M_{X_i}(z) = (q + pz^{-1})^n$$
 (9)

Now, mean is defined as the 1st moment of $M_{X_i}(z^{-1})$ at z=1 i.e,

Mean =
$$\frac{dM_{X_i}(z^{-1})}{dz}|_{z=1}$$
 (10)

$$=\frac{d(q+pz)^n}{dz}|_{z=1} \tag{11}$$

$$= np(q+pz)^{n-1}|_{z=1}$$
 (12)

$$= np(q+p)^{n-1} \tag{13}$$

$$\therefore \mathbf{Mean} = np \qquad \qquad \therefore (p+q=1) \tag{14}$$

$$= 3 \times \frac{1}{2} = 1.5 \tag{15}$$

The mean number of heads in three tosses of a fair coin is 1.5

The following code simulates the mean.
